

## Example table design specification.

The Account table must hold data about the customer, it must identify their account and give their balance etc.

The fields and data types should be as follows:

Field name	Data type	Description
Customer Name 1	Text	First name
Customer Name 2	Text	Family name
Account Number	Number	Unique number
Sort Code	Text	Code of bank
Balance	Number	Amount of money (£)

Example data:

Field name	Record 1	Record 2
Customer Name 1	Freddie	Frederike
Customer Name 2	Fillipos	Kallifos
Account Number	102487689	102418689
Sort Code	20-45-45	20-45-45
Balance	1020.56	569.32

Your table design specification can be similar to this (but for Types of Computers not Accounts!)
