

Types of Computer Models

There are many types of computers. The link below is a good place to start.

<http://computer.howstuffworks.com/10-types-of-computers4.htm>

A mobile phone is also a type of computer.

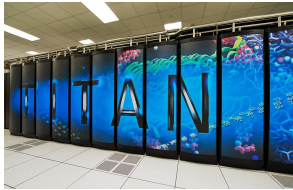

Your task will be to design and create a database table to add to the computer science database. The table will list types of computers and give information about them.

In this document research about the different types of computers. Include links to show where you got your information from.....

Problem to solve:

The problem to solve is that we do not have any data on computer types but we have everything else from inputs and outputs to gigabytes and megabytes. But what is the point of all that if you don't have a computer?

Computer Research

<u>Types</u>	<u>Description</u>	<u>Picture</u>	<u>Link</u>	<u>When it was first made</u>
PC	It is a personal computer which might include a phone,ipad or laptop.		http://computer.howstuffworks.com/10-types-of-computers6.htm	The first personal computer was made in 1975.
Supercomputers	Supercomputers are the most quickest computers for collecting data and are normally used by big organizations.		http://www.byte-notes.com/four-types-computer	The first supercomputer was made in 1962.

Mainframe	It is sort of like a supercomputer but it can be used by 1000s of people all at once and can store all that information.		https://blog.udemy.com/categories-of-computer/	IBM developed its first mainframe computer, known as the Automatic Sequence Controlled Calculator (ASCC), in 1944.
Desktop	It is not a portable computer but it stays in one place and can be bulky.		http://typeslist.com/different-types-of-computers/	The first personal computer was made in 1975.
Wearable	This you can wear or certain parts of your body.		http://typeslist.com/different-types-of-computers/	Wearable computers started in the 1970s.
Netbook	A netbook is even smaller than a laptop and it is very easy to carry around.		http://computer.howstuffworks.com/10-types-of-computers4.htm	Netbooks began when Asus released their first netbook in 2007.
PDA	A pda is a small computer that you can carry in your palm and can still send emails and provide internet access. It can also classify as a personal organizer.		https://www.google.co.uk/search?q=what+is+a+pda&rlz=1C1GGRV_enGB766GB766&oq=what+is+a+pda&aqs=chrome..69i57j0l5.4552j0j4&sourceid=chrome&ie=UTF-8	The first pda was called the Apple Newton Messagepad and was made in 1993.

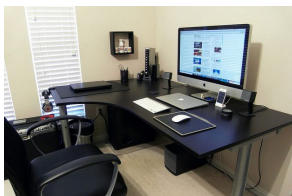

Workstation	A workstation is a computer that is more powerful than a desktop computer and it has an enhanced memory and can be used for special tasks.		http://computer.howstuffworks.com/10-types-of-computers6.htm	I think the first workstation computer was made in the 1980s.
