

How dose flight affect South Africa?

# Advantages

- Africa which could lead to an increase of tourists to South Africa and the creation of new business opportunities. Trade could also benefit through the availability of new aircraft links.
- There is large areas of land for an airport.
- South Africa would have many benefits with more aircrafts in their country because it would bring a wider range of tourists to the fantastic country.

# Disadvantages

- National interest: It is not advisable for States to become too dependent on 5th freedom services to serve their needs. National interest is best served by airlines over which the relevant state has direct control
- If there was to be an airport in South Africa the locals maybe unhappy with the noise of the air traffic produces.
- Investments: For creating aviation facilities, huge investments are required. The cost of aero planes, construction and maintenance of aerodromes and control mechanism needs a capital expenditure.

# South Africa

- Population: 52.98 million (2013)
- Currency: South African rand
- Capitals: Cape town, Pretoria, Bloemfontein.
- South Africa is located at the southern end of Africa.
