

## The door to the internet

**This is a guide to tell the people of the world how to be safe online. The door to the internet because the internet is like a door. When you open the door you step into the internet. Inside that door do you don't know what will happen to you. It is the same for the internet. You don't know what your going to discover when you enter through that door. This guide will tell you what you may find and how to deal with this information correctly**

## Cyber-bullying and how to stop it

- 1. Don't respond. If someone bullies you, remember that your reaction is usually exactly what the bully wants.**
- 2. Don't retaliate.**
- 3. Save the evidence. If you destroy the evidence, people won't believe you.**
- 4. Talk to a trusted adult. Maybe someone in your family. A teacher perhaps**
- 5. Block the bully. Ignore them**
- 6. Be civil. Don't be mean to other people. Always stay decent.**
- 7. Don't be a bully. Just because someone is being mean to you, doesn't mean that you can be mean to other people**
- 8. Be a friend, not a bystander.**

## Staying Safe, Smart, and Social

### Staying Safe, Smart, and Social

1. Keep your firewall security and anti-virus software up-to-date.
2. Never log in from public hotspots. Most social networking sites don't have a secure login (https), so your user name and password could be swiped at any time. Only log in from trusted wireless networks.
3. Use strong passwords comprised of upper- and lowercase letters, numbers, and symbols.
4. Be cautious with links and files. If you're not sure about the source, don't download or click on the link. Hackers will often post links in comments to try and trick you into clicking through.
5. Remember: If you wouldn't say it or do it in public, don't post it online.
6. Keep track of what your friends post about you. We've all heard stories about people losing clients or being fired because of inappropriate online content.
7. Be careful who you follow/friend. It may feel good to have hundreds of friends, but in reality, you only know a fraction of those people.
8. Be wary of add-ons. Many games and plug-ins are written by third party companies and not the social network. Look before you leap.
9. Do a search on yourself; you may be surprised. If you feel you have too much information out there, you can always restrict your online profile

E-safety is:

**Emails**– Never open emails from people you don't know

**Strangers**– Never chat with strangers

**Attachments**– never open suspicious attachments

**Forever**– Everything stays on the internet forever

**Enjoy**- videos and games from well known sites

**Trolls**– Tell a trusted adult about trolls/cyber bullying

**You!!**- You are most important person stay e-safe

There are many types of scam/viruses

1. Prizes and lotteries
2. Advanced Fee Scams
3. Email Scams
4. Investment scams
5. Employment scams
6. Gambling systems
7. Telemarketing

I decided to include the scams that anyone could recognise from the names.

Over 30,000 website everyday

That means that any day you could get hacked as well. Stay safe by looking after yourself through and through. If you get hacked tell someone immediately and turn the computer of phone of quickly as possible.

So many people can get hacked and people can lose money and personal informational. Don't put all your personal information on your phone or compute. You can sometimes make the it up.
